
The Evolving Threat Landscape & Zero Trust Journey

Digvijay Pednekar
Territory Account Manager

Evolving Data Landscape

Data Sprawl and Fragmentation

"85% of orgs don't know where their sensitive data lives."

- Gartner

Gen AI Risk Explosion

"Data leakage remains the top threat. Close behind, however, is the insider threat supercharged by AI"

- Marcelo Amaral, CISO, Banco Safra

Governance and Regulatory Pressure

"Regulations evolve fast (GDPR, HIPAA, NIS2, PCIDSS)... need a shift from reactive to proactive data governance."

- Enda Kyne, CISO, FBD Insurance

Security Stack Fatigue

"Standalone solutions created inefficiencies and drained resources."

- Gabe Guerra, Information Security, Mariner Finance

A Day in the Life of Sensitive Data

Without proper data security controls, a single sensitive document can proliferate across 5+ locations in minutes.

A New Data Security Approach is Required

Discover

Scan and map sensitive data across environment

Classify

Intelligent classification with context and sensitivity

Prioritize

Focus on high-impact data based on value, usage, and risk

Remediate

Automate response to based on risk level and user behavior

Protect

Enforce real-time controls to prevent data loss across all channels

Proper data security requires these answers, not as a point in time, they are not sequential, but continuously, across all channels

Forcepoint's mission is to enable effortless Data Security Everywhere

People can safely work anywhere with data everywhere

Examples

Forcepoint named a Leader in IDC MarketScape Worldwide DLP 2025 Vendor Assessment

Forcepoint DLP includes the full spectrum of DLP capabilities in its core offering. It can be used with unstructured and structured data, including images, and across data at rest, data in motion, and data in use.

Adding AI-Mesh to DSPM shows customers where their specific data is, its protection status, and the ability to immediately add or adjust classification on that data.

Customers appreciated the simplicity and user-friendliness of the product interface, the unified management of policies, and the stability of the product during updates.

Source: "IDC MarketScape on Data Loss Prevention 2025 Vendor Assessment", doc #US53234325 April 2025

IDC MarketScape vendor analysis model is designed to provide an overview of the competitive fitness of technology and suppliers in a given market. The research methodology utilizes a rigorous scoring methodology based on both qualitative and quantitative criteria that results in a single graphical illustration of each vendor's position within a given market. The Capabilities score measures vendor product, go-to-market and business execution in the short-term. The Strategy score measures alignment of vendor strategies with customer requirements in a 3-5-year timeframe. Vendor market share is represented by the size of the icons.

Forcepoint: Where Trust Meets Tomorrow

Over two decades of trust to secure tomorrow's data landscape

Proven Foundation

Leadership in Data Protection

20+ years securing the
world's most sensitive data

Market Evolution

Adapting to Modern Threats

Cloud-first transformation,
securing sensitive data across
new environments

Continued Innovation

Data Security Everywhere

AI-powered data
security innovations
AI Mesh, DSPM, DDR

From proven foundations to next-gen innovation. Forcepoint is driving the future of self-aware data security.

The industry's only self-aware data security

"[Forcepoint is] defining wide values, data security, classification, having the appropriate tools to actually monitor what is going on... you have the data in a container that is so well designed and protected, and you have appropriate DLP and access control rules to actually start the learning curve of AI adoption."

– Marcelo Amara, CISO, Banco Sofra

"Forcepoint DSPM and DDR tools have been very much embraced by our teams because they're easy to use, modern, and actually fit for purpose. It's allowed teams to act on real issues."

– Enda Kyne, CISO, FBD Insurance

SalesEngineer

AI Transformation is changing everything—and raising questions—even more than Digital Transformation

You need access to GenAI,
but how do you keep your data safe?

Who is using sensitive data?
What kinds? Where? How? Why?

How do you seamlessly enforce
data security everywhere?
(GenAI, SaaS apps, web, endpoints, email, your own apps, etc.)

GenAI: great power, even greater responsibility—and the tip of the iceberg

Phil Muncaster
UK / EMEA News Reporter, Infosecurity Magazine
Email Phil Follow @philmuncaster

Rampant generative AI (GenAI) use next year will lead to some major data breaches and fines for application developers using the technology, according to a lead

CONFERENCE / BRAINSTORM TECH

As A.I. spreads through the office, companies are rethinking how they deal with data

BY KATHERINE FORD
14 NOV 2023 10:00 AM

Why data, AI, and regulations top the threat list for 2024

The new year finds us confronted by a landscape characterized by political uncertainty, social fragmentation, escalating geopolitical tensions, and a turbulent macro-economic backdrop, making it crucial for security leaders to strategically prepare for the forthcoming challenges.

Looking to 2024: Data, AI and security will be top priorities for businesses

By Nathan Vega Published 5 days ago

Data Security is now a business imperative

UNITED NATIONS
UNCTAD

The growing threat of data breaches creating need for continuous data monitoring

Global average cost of a data breach reached an all-time high of \$4.88 million in 2024, a 10% increase from 2023¹

In the third quarter of 2024, 422.61 million data records were leaked in data breaches²

It takes organizations an average of 258 days to identify and contain a data breach³

Region*	2024 Breach Cost(US \$M)	Change from 2023
United States	\$9.36	-1%
Middle East	\$8.75	+8%
Germany	\$5.31	+14%
Italy Canada	\$4.73	+24%
UK Japan	\$4.66	-9%
France	\$4.53	+8%
LATAM	\$4.19	-7%
ASEAN	\$4.17	+2%
Australia	\$4.17	+2%
India Br azil	\$3.23	+6%
	\$2.78	+3%
	\$2.35	+8%
	\$1.36	+11%

Forcepoint's mission is to enable Data Security Everywhere so that people can safely work anywhere with data everywhere

Increase Productivity

Have people work anywhere with data everywhere—seamlessly, faster, easier—even from BYOD

Cut Costs

Replace fragmented infrastructure with more efficient, easier cloud service that cuts helpdesk calls too

Immediate Economic Impact

Reduce Risk

Use Zero Trust and enterprise-class security to continuously protect sensitive data wherever it is used

Streamline Compliance

Have consistent visibility & control everywhere

The Challenges of Securing Sensitive Data

Data-at-Rest

Where is it?

Data-in-Use

How is it changing?

Data-in-Motion

Do you have control?

Forcepoint's Data Security Everywhere

Full lifecycle security visibility & control for data at rest, in use, in motion

Data-in-Use
Forcepoint DDR

Data-in-Motion
Forcepoint DLP

Gaining visibility and control over how GenAI sites are being used

The icon shows a central brain icon with four smaller brain icons around it. Two are labeled 'authorized' and two are labeled 'other GenAI sites'. The 'other GenAI sites' are marked with a red prohibition sign.

Manage Access

See how GenAI sites 'in the wild' are used by your people

The icon shows a brain icon with an upward arrow from a person icon and a red prohibition sign over a database icon.

Block Uploading

Allow access to certain GenAI sites, but still prevent file uploads

The icon shows a Microsoft Azure logo with two database icons below it. One database has a red prohibition sign and a red 'X' tag, the other has a green checkmark tag.

Control Data Use

Inspect and control which data can be uploaded or pasted into sanctioned GenAI sites

The icon shows a magnifying glass over a brain icon with a green checkmark and a red prohibition sign.

Monitor

Track who, what, when sensitive data was uploaded (ChatGPT Enterprise)

Forcepoint combines SSE, DLP, and DSPM to handle rapidly evolving GenAI needs

Modernize with Data Security Posture Management (DSPM)

AI-powered automation across the whole data security lifecycle

Discover sensitive data across important cloud and on-prem locations

Classify using AI Mesh engine for superior accuracy and efficiency

Prioritize where to focus efforts on securing the data posture efficiently

Remediate over-permissioned, redundant, and misplaced data

Protect sensitive information and regulated data everywhere

AI-powered Data Security
Posture Management (DSPM)

How well do you know your data?

Data in a digital world presents new challenges

Old ways of protecting data don't work

Forcepoint DSPM

AI-powered data discovery and classification with real-time risk reporting and orchestration

Comprehensive discovery

In the cloud (Amazon, Microsoft, Google) and on-prem; up to ~1M files per hour.

AI Mesh-powered data classification

Powered by a highly trained, high-efficiency AI Mesh for greatest accuracy and speed

Real-time monitoring and risk assessment

Understand data, access permissions and other data risks in near real-time

Workflow orchestration

Track data ownership and accountability to ensure actions taken are aligned with each stakeholder

Extensive data sources

Cloud collaboration (O365), cloud file stores (SharePoint, Gdrive, Box), GenAI (ChatGPT Enterprise), IaaS (AWS, Azure), SaaS apps, IAM, on-prem storage (SMB, SharePoint)

Discovery and classification create a foundation for applying controls to data

Contextualizing Data

Identifying

- SSN, Address, Account ID, TaxID, Drivers License, Age, Geo, Product Codes, and more

Categorizing

- PII, PCI, GLBA, ITAR, GDPR, CCPA, PHI, NPI, LGPD, PIPEDA, and more

Classifying

- Sensitive, Secret, High Low, Public, Private, Confidential, and more

Labeling

- HR, Legal, Source Code, Intellectual Property, and more

Forcepoint DSPM is powered by the industry's first security AI Mesh

Forcepoint DSPM AI Mesh

Accurate, Fast, Explainable, Lower TCO

- Smaller: SLM10X smaller than LLM models
- Faster Classification: 200 milliseconds using regular CPUs
- Lower TCO: smaller nodes significantly lowers cost
- Trainable: can be tuned to unique classification requirements
- Explainable: Simplifies audit of AI for more transparency / trust

Forcepoint's AI Mesh is modular—uses focused, extensible architecture

	Small Language Models (SLM)	Large Language Models (LLM)
Type of AI	Narrow AI	General AI
Focus	Tight, trained using specific, relevant data classes	Broad, potentially using inappropriate data
Extensibility	Easier to swap in optimized models	One size fits all
Accuracy	Higher due to more focused ties to right data	More prone to hallucinations
Efficiency	Smaller memory footprint, less compute intensive	Large compute and storage requirements
Reliability of Output	Clear justifications, more traceable to original input	Often opaque, creating security/business risk
Resilience to Bias & Manipulation	Less susceptible due to focused training	More susceptible to inheriting bias
Robustness against Attack	Less vulnerable to manipulated input	Easier to manipulate

Forcepoint's AI Mesh uniquely uses optimized SLM and focused AI techniques to deliver superior results

Example: giving visibility into how people are using ChatGPT Enterprise

Example: enabling safe use of GenAI

High-accuracy, AI-powered classification enables blocking of unauthorized data usage by Copilot

Large Financial Institution –needing total view into their data to prevent further breaches.

Challenges

- Stop leakage of sensitive data from employee's mailboxes. Breach had already taken place showing their email to be a large point of potential exfiltration.

Approach

- UseForcepoint to do a major scan before legal was to get involved.
- 5 days to scan across 2.5TB of raw data, 9 million emails with attachments in 5 different languages.

Results

- Completed total scan of 2.5TB in just 2 ½ days!
- Were able to identify sensitive email content and remove sensitive data.
- Just one email had bank account details and screenshots of bank statements covering billions of dollars.

Forcepoint

"As part of Forcepoint's broader data security ecosystem, DSPM has integrated seamlessly with our existing solutions. It's an essential component of our overall data security strategy."

Indonesia Financial Group (IFG)

Modernize and automate the data security lifecycle with AI-powered DSPM technologies

Increase Productivity

Enable faster, safer data access and sharing for better innovation & collaboration

Cut Costs

Automate to save time/resources on investigations & remediation; save on cyber insurance

Reduce Risk

Prevent breaches by uncovering and fixing sensitive data misuse, exposure

Streamline Compliance

Gain visibility and control over sensitive data everywhere and mature your GRC program

Forcepoint does Data Security Everywhere better than anybody else

Recognized

Leader in ForresterWave for SSE
(March 2024)

Leader in Forrester Wave for
Data SecurityPlatforms
(March 2023)

Industry Firsts

Data-first SASE platform
(integrated CASB, SWG, ZTNA with DLP,
malwaredefenses, distributed enforcement)

Risk-Adaptive Protection

Secure SD-WAN

Expansive Protection

Broadest enforcement channels

APIs for adding to custom apps

Easy to Use

1700+ built-in templates for industries
and 150+ geographies

Integrated into SSE/SASE gateways

Single-pane management
of policies and incidents

AI

AI mesh-based discovery, classification,
prioritization, orchestration

Granular visibility into ChatGPT Enterprise

Prevent inappropriate use of GenAI sites

Unparalleled Accuracy

Detection of 900+ file types

ML-based content recognition

Structured & unstructured data

Forcepoint DDR: continuous monitoring to see and stop potential data breaches

DataDetection&Response

Continuous monitoring of file repositories

Continuous visibility into data creation, modification, movement and permission changes

AI-powered data classification

Powered by a highly trained, high-efficiency AI Mesh for greatest accuracy and efficiency

Dynamic incident alerts

Automated alerts and dashboards show data, access permissions and other data risks

Data lineage

Track unstructured data as it moves and changes for stronger investigations*

Extensive cloud data sources

AWSS3, AzureAD, Azure Blob, Azure Files, Google Drive, Confluence Cloud, Box (on-prem March)

Detect Misuse of Data So You Can Fix it Before It Becomes a Breach

DataDetectionandResponse(DDR)

Discover file creations/modifications/movement, permission changes

Classify files whenever changes found

- Gather context and generate “multitag” classification

Prioritize potential incidents for attention

Alert admins and simplify **remediation**

Identify risks so policies can be updated to **protect** against breaches

Continuously **monitor** data repositories for closed-loop security

Enables Remediation Actions to be Taken Directly from Console

The screenshot displays the Forcepoint console interface. At the top, there's a navigation bar with tabs like 'Data Source', 'Endpoint', 'Analytics', 'Policy Center', 'DCL', and 'Administration'. Below this, a search bar and filter buttons (SOURCE, PATH, RISK, DETECTOR/HITS, CREATED AT, ADD FILTER) are visible. The main area contains a table with columns: Path, Risk, Classification, Compliance Tags, Detector Hits, Data Attributes, Keyword Hits, and Last Modified. Five rows of data are shown, each representing a file with its path, risk level, classification, and associated tags. At the bottom right, a '1 selected' status bar shows a dropdown menu with three options: 'Send to classification pipeline', 'Revoke permissions', and 'Move selected file(s)'. A yellow dotted line connects this menu to a larger, detailed version of the same menu on the right side of the image.

Path	Risk	Classification	Compliance Tags	Detector Hits	Data Attributes	Keyword Hits	Last Modified
